

Why to Code at Night

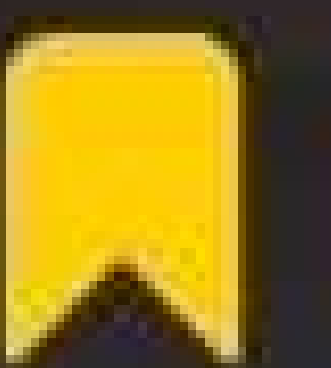

code__buddy__
Ganesh Kokate

If you ask most developers when they prefer to work, many will say their most productive hours are at night.

01.Constant Interference

Doing it during the day means having to deal with interruptions in the form of people, calls, texts and life, in general. But at wee hours at night there is no one to disturb you, no social notifications to bug you and you can code just on the projects that you want to.

02.The Peaceful Quiet

The quiet atmosphere at night actually feels a lot better for mentally stimulating task such as coding.

“Anything is possible when you have inner peace”
— Master Shifu, Kung Fu panda

03.The Darker, The Better

Even during day, many developers prefer drawing all the curtains and keeping the light out by any possible means.

04.Night Owls/Early birds Are More Intelligent

Studies have already proved beyond a doubt that night owls/early birds tend to be more intelligent and creative than others, so great news there! No wonder all the famous creative people were night owls or early risers
